

Workshop Week 5

Christian Nassif-Haynes

3 September 2013

Tutorial

2. It is not possible to share memory between variables in this case. The minimum required amount of memory is $4 \text{ bytes} \times 9 = 36 \text{ bytes}$.
4. In Java a live variable binding may lose scope when either a) the header or; b) the body of a class's function contains a variable by the same name as one of that class's field variables.
